

Plan Your Cloud Proof-of-Concept(POC)

Proof of Concept (POC) approach helps you to accelerate the Cloud adaption journey by applying the proven methodologies and minimizing any unforeseen risks.

POC is the Safest Approach to Your Digital Transformation

POC plays a critical role in a successful digital transformation and adopting the new business processes. Cloud-Services are like pieces of a puzzle, many of them have similar functionalities and at times it's confusing to make the right choices. POC provides you a complete risk-free approach to explore these pieces of puzzles and build the best suitable solution for your business.

Best way to test your Ideas

There is no one formula for a successful digital transformation, rather it provides you an opportunity and liberty to test all your ideas before you can apply them to production. Our Cloud POC model works with you to implement your ideas and experience the results well in advance.

Explore more possibilities

You'll always have queries about whether and how the solution will handle certain business processes or activities, so there is no better way to get the right answers than having a POC. It provides you the exact details of all the technical possibilities.

Rollback anytime

Unlike the production environment, where it's little difficult to rollback any implementation that is already launched, POC gives you the full liberty to roll back if you are unconvinced with the desired outcome. At any stage you have all the control to either plug or unplug any component or service if it suits to your business outcome.

Scale Up

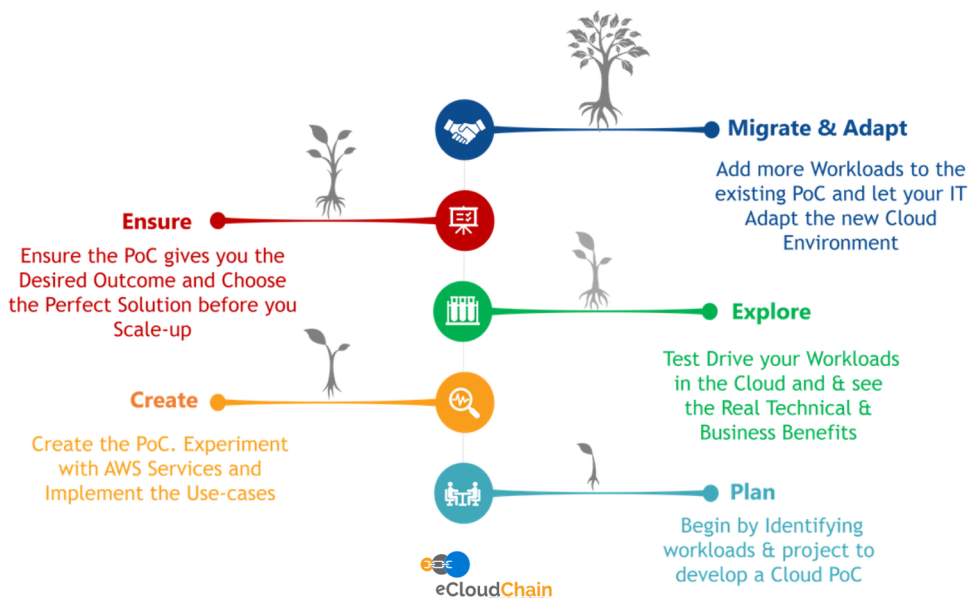

Test Solution

Quick Wins

Innovate Fast

Start Small

Start-Small

POCs are performed on a smaller scale with a few selected workloads so it's cheaper and faster. Our POC team works with you to identify the ideal workloads to be considered for the POC projects. We start by building the required infrastructure on the AWS Cloud and then migrate your workloads.

Isolated-Setup

We build the new AWS Cloud infrastructure for you that is completely isolated and does not impact or integrate with your live production environment. Based on the nature of the POC, we take the backups of your databases/applications to analyze and then set it up on the Cloud

Pay-As-You-Go

Pay significantly low by using the Pay-As-You-Go pricing model. Only pay for the services and resources that are required for the POC. There is no upfront financial commitments or any minimum fee required for the newly built AWS Cloud infrastructure. These servers can anytime be start and stopped to save the cost

Secure

Get complete Data-Security and Compliance with automation of underlying services. Data encryption policies and features keeps the data fully secure during rest and transit mode. Data protection is given the highest priority

Identify the Ideal Workloads for your POC

Prioritize your key workloads

You don't need to plan for any big-bang approach for any of your Cloud projects with many assumptions in mind. With our POC model, get a full clarity on all the technical, financial, and business facts and dependencies to help you do the better decision making. Identify midsize and less complex workloads that are neither too complex nor too simple to put the best foot forward. Our team will work with you to re-engineer your existing workload and configure it on to the AWS Cloud.

Engage Your Teams to get Maximum Learning

Prepare people to adapt new changes fast

Any Digital-Transformation or Cloud-Migration is also about adapting the new cultural changes that take some time. Consider the POC planning as an opportunity to revamp your teams, Its an excellent time to introduce your team members to the transformation technologies since it will help your organization to adopt the change faster and deliver the business outcomes with a lot of quality. POC offers many opportunities for your teams to learn and absorb new skills

"Our main objective is to ensure your success in AWS. We help you navigate the complete Cloud solution with the powerful AWS cloud infrastructure services and help you get the most out of it."
